

For what will be enough the electricity produced in the Paks II. Nuclear Power Plant?

Electricity produced daily in the Paks II. Nuclear Power Plant would be more than enough for all the mobile phones in the world to be fully charged once a day.

For what will be enough the electricity produced in the Paks II. Nuclear Power Plant?

Nowadays, high consumption devices use electricity, which used other fuel earlier. Just think of the evergrowing e-transport or heat-pump heating systems. In order to meet this increasing demand for electricity, we have to build new, preferably carbon-free, power plants.

- ▶ The hourly electricity production of Paks II. Nuclear Power Plant would be enough to charge 200 million phones. The daily production of the power plant would be enough to charge all the mobile phones in the world once.
- ▶ The two new units will be able to meet the entire Hungarian electricity demand.
- ▶ If every Hungarian household had a heat-pump system to provide heating and hot water, then the electricity produced in the Paks II. Nuclear Power Plant would be enough to supply half of the country.
